

Bisphenol A Free Certification Letter

Dear Customer,

Panoramic, Inc. uses polyester resins in the manufacture of our plastic product(s). The materials most commonly used are: FDA RPET, FDA RPET with Modifier, APET, RPETG, and VPETG. Our supplier's certify, that their sheet is not made with Bisphenol A (BPA) nor is BPA an added component. Furthermore, we do not add BPA as part of our manufacturing process.

“Bisphenol A (BPA) is a chemical building block that is used primarily to make polycarbonate plastic and epoxy resins. Over four decades of extensive safety research on BPA shows that consumer products made with BPA are safe for their intended uses and pose no known risks to human health.”

I hope this information satisfies your needs. Thank you for your interest in our products.

Yours sincerely,

A handwritten signature in black ink, appearing to read "Adam Holznecht", with a long horizontal stroke extending to the right.

Adam Holznecht
Quality Assurance Manager
